EDUCATION

Master of Human-Computer Interaction

Carnegie Mellon University

2019 · Pittsburgh, PA

Bachelor of Graphic Design

OCAD University

2013 · Toronto, Canada

EXPERIENCE

ClickUp · VP of Design & Research

2023 – Present

Promoted Jan 2026 · Sr. Director 2024–2025

Product Design Manager 2023–2024 · Sr. Product Designer 2023

I lead product design and research in close partnership with the CEO, currently as a player-coach for 6 designers and 2 researchers. I stay close to the details, often shipping features myself. Since 2023, I've shaped every major feature as the company grew from \$150M to \$360M+ ARR.

Turning ClickUp into an AI-native work platform

- Led design across ClickUp's AI suite (Brain, Super Agents, AI Fields, AI Summaries, Artifacts, Skills) with three designers. Pushed pace & quality, aligned parallel teams by rapid prototyping, customer testing, and daily dogfooding
- As a result, Brain adoption grew from 9.6% to 19.6% while improving M1 retention by 35%. AI subscription ARR grew from \$6.89M to \$40.73M (5.9x) from Jan 2025 to Jun 2026, with NDR crossing 100% (98.2% to 102.1%)

Driving growth across the full funnel

- Led Growth design across activation, onboarding, retention, monetization, and access management, shipping 171 in-app experiments by balancing quantitative testing with customer interviews, think-alouds, and iteration by intuition
- Two winning experiments: an onboarding agent lifted WO retention 3.3%, and a credit-card free trial raised net paid upgrade rate 13% (statistically significant, net of downgrades)

Leading initiatives, owning the details

- Led ClickUp 4.0, the largest redesign in company history: a new visual language and navigation IA across Lists, Chat, Docs, and core surfaces. Product NPS rose 15 points to an all-time high; Task View shipped to 456K users at a 0.09% revert rate

Building the design practice, then remaking it for agents

- Stood up the research and design practice and reinvented it for agents. Now agents launch studies, and live prototypes are coded and testable in minutes in the Prototype Playground; designers ship simple fixes straight to the frontend repo
- Built the design system myself, then won resourcing to take it 0 to 1, replacing thousands of hardcoded components and tokens. It's now the self-healing source of truth agents build from, correcting itself with human feedback
- Grew design 12 to 18 and research 1 to 4, with 6 promoted across both teams. Sharpened the hiring bar; built career ladders, personalized paths, and a performance rubric on Craft, Collaboration, and Leadership; and designed the rituals that drove alignment, quality, and speed

'Nuffsaid · Head of Design

2022 – 2023

Acquired by ClickUp, backed by Google Ventures and General Catalyst

- Joined as Head of Design and second design hire, brought in to rebuild the design practice
- Owned product, design language, and vision for a universal inbox for customer success teams
- Set up a weekly iteration loop from insights to prototypes with a live customer advisory board, building deep customer empathy across the team. The continuous discovery loop revealed that we were building the wrong thing, so we pivoted and launched a new product from scratch within three months

Uber · Sr. Product Designer

2019 – 2022

Advanced Technologies Group (acquired by Aurora, 2021)

- Made complex tools more usable for ML engineers through human-centered design, leading user research and product design end-to-end across multiple autonomy teams
- Designed tools for log search and mining, map generation, and vehicle-data visualization used by mission specialists, triage teams, and autonomy developers

Bloomberg LP · Product Consultant

2019

- Designed the next-generation data annotation platform that Bloomberg's data scientists use to train more accurate machine learning models. It ensured annotation quality, streamlined annotation requests, and consolidated multiple annotation sources

Headspace · Product Consultant

2019

- Designed new mobile features aimed at the highest-attrition segment to lift weekend engagement

BlueDot · UX & Data Designer

2014 – 2018

- Designed and built ML tools to track and predict how infectious diseases spread, including 100+ data visualizations, one featured in The Economist
- Built the product 0 to 1 across vision, research, build, and release. Created the proof of concept behind a \$1M+ Air Canada partnership
- BlueDot later became the first in the world to flag COVID-19 ahead of the World Health Organization

SKILLS

Design & research: Product design, Design systems, Interaction design, Prototyping, Usability testing, Mixed-methods research, Continuous discovery, Data visualization

AI product: AI product design, Agentic workflows, LLM-powered features, AI-assisted prototyping

Leadership: Org leadership, Hiring, Career frameworks, Performance management

Tools: Cursor, Figma, ClickUp, React, TypeScript
